

Typical Pain Points at Bank Counters

Triple pressure from paper documents: efficiency, cost, and compliance

Too Many Paper Forms

Account opening, transfers, wealth management, and loss reporting all require customer signatures — many types, large volume.

Difficult Archiving, Slow Retrieval

Paper vouchers need printing, binding, and storage. Post-event retrieval takes time and cannot quickly respond to audits.

Low Counter Efficiency

Printing, signing, scanning, and archiving add many steps. Each transaction takes longer, and customer experience suffers.

Hanvon Signpad Bank Counter Paperless Solution

From signature capture to electronic document synthesis — fully paperless

1

Business System Calls Signature Control

The counter business system calls Hanvon's signature control via SDK — no need to modify the core system.

2

Customer Signs on the Pad

Customer completes original handwriting signature on the LCD pad, displayed synchronously for confirmation.

3

Signature & Document Synthesis

Original handwriting signature and electronic document are synthesized into a tamper-proof PDF/OFD file, encrypted for transmission.

4

Automatic Return & Archiving

Electronic documents are automatically returned to the business system for archiving, supporting fast search and retrieval.

Recommended Products

Choose the right model based on counter space, transaction volume, and display needs

ESP700
7.0" Electronic Signature Pad
