

Securities / Insurance Signing Solution

Typical Pain Points in Securities / Insurance

High volume of account opening, insurance, and risk confirmation documents — strict compliance requirements

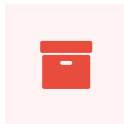

Large Volume of Documents

Account opening agreements, insurance applications, risk confirmations — many types and large volume. Paper process is cumbersome.

High Compliance Requirements

Regulators require signatures to be traceable and verifiable. Paper signatures struggle to meet e-compliance requirements.

Difficult Archive Management

Paper archives take up space. Post-event retrieval and audit are inefficient.

Hanvon Signpad Securities / Insurance Solution

Original handwriting signatures + encrypted transmission, meeting compliance and archive management requirements

1

Business System Calls Signature Control

Account opening and insurance systems call the signature control via SDK, quickly integrating e-signature capability.

2

Customer Signs on the Pad

Customer completes original handwriting signature, displayed synchronously for confirmation.

3

Signature & Agreement Synthesis

Original handwriting signature and electronic agreement are synthesized into a tamper-proof PDF/OFD file, encrypted for transmission.

4

Automatic Return & Archiving

Electronic agreements are automatically returned to the business system for archiving, meeting regulatory traceability requirements.

Recommended Products

Choose the right model based on transaction volume and compliance requirements
